Noida, Uttar Pradesh, India

Professional Summary

Backend developer and B.Tech student with practical experience in building scalable APIs, caching proxies, and microservices using Node.js and Express.js. Strong foundation in backend architecture, API security, and performance optimization, with a focus on clean, maintainable server-side code.

Education

Galgotias College of Engineering and Technology — Noida, India
Bachelor of Technology in Computer Science — *Oct 2023 – June 2027*

Sri Krishna Children Secendory Academy — Ayodhya, India
Higher Secondary Certificate (CBSE) — *2022*

Technical Skills

Programming Languages: Java, JavaScript, TypeScript, SQL
Frontend Technologies: Next.js, React.js, Tailwind CSS, HTML5, CSS3
Backend Technologies: Express.js, Node.js, RESTful APIs, GraphQL
Databases: MongoDB, MySQL, Redis
Developer Tools: Git, GitHub, Docker, Postman, VS Code, Linux, Vercel, AWS
Core Competencies: Data Structures & Algorithms, System Design, Object-Oriented Programming, Microservices

Projects

Production-style HTTP caching proxy server | *Node.js, Express.js, JavaScript, REST APIs* — GitHub

- Built an HTTP caching proxy server using Node.js and Express.js to forward and cache client requests
- Implemented in-memory caching for GET requests to reduce redundant origin server calls
- Designed logic to distinguish cache hits and cache misses for optimized response handling
- Structured backend using controller–route architecture for modular and maintainable code

ApplyTrack-API – Job Application Tracking Backend | *Node.js, MongoDB,Express* — GitHub

- Developed a RESTful backend API using Node.js and Express to manage job application tracking workflows Structured project with modular controllers, routes, and models for scalable development
- Designed Mongoose schemas (or similar data models) to store and retrieve application data efficiently
- Ensured API reliability and correctness via Postman / automated tests

Notification Microservice | *Node.js, MongoDB, Redis* — GitHub

- Designing a scalable notification microservice to handle email, SMS, and in-app notifications
- Developing REST APIs for triggering and managing notifications Using Redis / in-memory caching to optimize notification delivery and retry logic
- Implementing asynchronous processing to ensure high throughput and low latency
- Adding retry, failure handling, and dead-letter queue logic for reliable delivery Securing APIs with authentication and rate limiting to prevent abuse

Certificates & Achievements

Salesforce 10+ BADGES – Salesforce

Microsoft Azure CLOUD Fundamentals – Microsoft

Database Management System (DBMS) – Infosys Springboard

Solved **500+** Data Structures and Algorithms problems across LeetCode, GeeksforGeeks, and CodeChef.

Runner-up of **HACKBASE 2026**.
